Modifications of the draft final report on ventilation following stakeholders' comments

March 2009

Corrections made in the July 2008 draft final report release

The major modifications made to the report regard three tasks : task 4, task 7 and task 8.

1) In task 4 : the Appendix B.2 has been revised. Part B.2.1 contains the computation of average operating conditions. A part dedicated to single duct air conditioners has been added. The appendices B.2.2 to B.2.4 explain the change in the seasonal performance indices.

2) In task 7 : two paragraphs have been added. The paragraph 7.4.8 gives the results when performing the LLCC analysis separating cooling and heating modes. The paragraph 7.4.9 draws the comparison between heat pumps and other heating systems.

3) In task 8 : the limitations of efficiency improvement induced by the necessity to have similar targets in cooling mode for all air conditioners and the comparison with other heating systems has been included. The EU energy label has been modified accordingly. Scenarios have been revised in consequence as well as related tables in the impact analysis. The sensitivity analysis has been retuned ; the appendix A, no longer necessary, has been removed. The technical appendix 8.4 has been revised to take into account revised performance indices presented in Task 4.

In task 8, other modifications have been done following stakeholders comments.
